

1. GenMyModel: <https://app.genmymodel.com/>
2. I find GenMyModel to be interesting because it has a lot of features that help in drawing our diagrams faster. A few such features:
 - Ability to add the data type of an attribute for a class by choosing the relevant datatype from the dropdown box.
 - You can create a project and allow multiple developers to work on one UML model project.
 - Java code for the UML Class diagram is also auto-generated based on the class diagram drawn. This code is downloadable for use.
3. The UML Class diagram I drew using GenMyModel:
