Part C - UML Tool

Name: Gleek
Link: https://www.gleek.io/
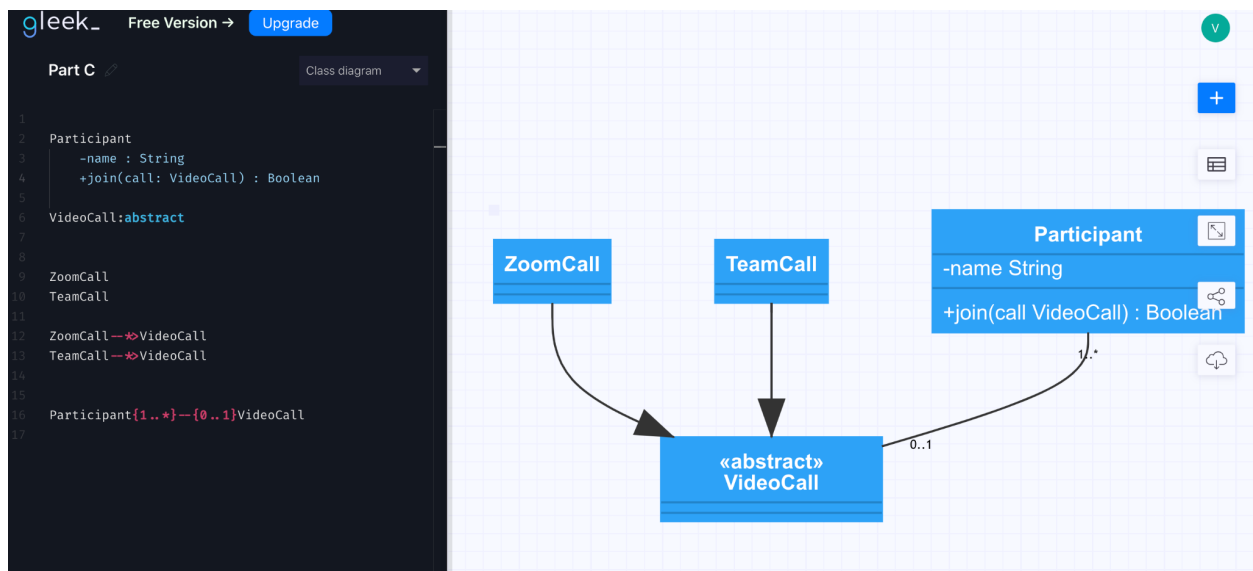

What's interesting about Gleek:
I'm a programmer and I'm very used to using a keyboard for everything (including navigation). I loved sequencediagram.org because it allowed me to type up a model instead of using the mouse. Similarly, I like Gleek to make UML diagrams because it uses its own DSL to draw UML class and sequence diagram (unfortunately doesn't have the ability for activity diagrams!). The screen shot I've attached shows an example of Part A in gleek.

Unfortunately, the tool doesn't have the ability to specify the different arrow heads and return values are omitted from methods.
